GOODYEAR'S
India Rubber

CURLER COMPANY,

No. 729 BROADWAY,

(COR. WAVERLY PLACE,)

NEW YORK.

GOODYEAR'S POCKET GYMNASIUM. AND HEALTH LIFT.

Is rapidly superseding most of the appliances devoted to physical culture, by virtue of its superiority, convenience and wide range of adaptation. It consists of pure India Rubber Tubes, with suitable handles and check cord inserted. These tubes, eight in number, are of various sizes, and are adapted to any degree of strength in persons of either sex or any age.

All children, young people, and people of sedentary habits will find both pleasure and profit in the use of this unique and potent little Gymnasium.

 Send for Description and Illustrated Circular.

GOODYEAR'S POCKET GYMNASIUM.

No compulsion or stimulus is necessary to keep up its use. It possesses an interest peculiarly its own. It is this which makes it so much like a living force, furnishing fun and frolic for the children, companionship for the bed-ridden invalid, amusement for the student, diversion for the anxious business man, recreation for professional men, rest and relief, health and exhilaration for all.

FINE CLOTHING.

Wholesale Prices and Terms on Application.

The goods we offer under this head are the *best made in this or any other country, for lightness and elegant cut and finish; and very much superior to any goods of foreign manufacture for durability*, and the withstanding of extremes of heat and cold, as many can testify, who, under the illusion that anything foreign must be superior, have purchased them, and some stormy day, wishing to use them, found their pet "imported, you know," in a congealed mass, or as stiff and brittle as glass. We beg leave to call your attention to the following "specialties" in fine goods, particularly suitable for army and navy officers and sportsmen.

Our "**Silk Reversible**" Coat, made on plain black; also, on check silk, weight 15 ounces; a very superior article. Pattern 2.....Price, \$22

Our new "**Cloth Reversible**" Coat, is well adapted for officers' wear, combining a handsome spring overcoat on one side, and a rubber coat on the reverse side; they are made in the following colors: navy blue, olive brown, olive green, drab, steel gray, and mixed, with and without velvet collars. Pattern 2.....Price, \$18

The "**Virgin Gum Coat**," light color; weight, 14 ounces; will stand any climate. Pattern 2.....Price, \$5.

Also, the "**Cambric Reversible**" Coat; black; made on fine cambric; weight, 24 ounces, and a great favorite. Pattern 2.Price, \$9 00

The "**Featherweight**," on fine Scotch gingham; weight, 9 to 10 ounces; can be carried in the pocket. Pattern 2.....Price, \$9

Entirely new, the "**Harvard**" Coat, with cape, well ventilated in back—a great improvement—neat fitting, and stylish; made in black. Pattern 4.....Price, \$7 50

EXTRA LIGHT.

Short, Knee and Hip Boots, Flasks, Drinking Cups, &c.

In ordering Fishing Pants or Boots, give size of shoe worn, or actual length of foot.

Boots are generally worn large enough to admit of slippers without heel, or heavy woolen socks.

GOODYEAR'S

"FEATHERWEIGHT"

WATERPROOF GOODS

Are made of Scotch Gingham of the finest quality, covered with a very thin coat of a new compound, which renders the cloth entirely impervious to water, giving it a rich, silk-like appearance. When coated, it weighs only about two ounces to the square yard, and a full-size Ladies' Cloak weighs only about ten ounces, can be rolled into a package that can easily be carried in the pocket, and when worn is so light as to be almost imperceptible to the wearer. They are an equal protection against the showers of summer, the rains of spring and fall, or the severer storms of winter, and are an invaluable addition to every lady's outfit. They are absolutely

Proof Against Changes of Temperature, Moisture or Age.

being rendered so by our **Improved Method of Manufacture**, which dispenses with the destructive processes that are used in all other systems of manufacturing similar materials.

In ordering a coat, give height and weight of person, and measurement around breast. In Ladies' Cloaks, measure from back of neck to bottom of dress, and designate the style, as per list.

Rubber Clothing should be worn rather easy than otherwise.

GENTLEMEN'S FEATHERWEIGHT LONG COATS.

(Pattern 2, page 3.)

The utility of this Coat is greatly enhanced by our form and style: it is made extra long, loose fitting, with sleeves lapping over and buttoning at the wrist, affording the most perfect protection to entire person of the wearer.

PRICE, EACH SIZE, \$9.00.

Sizes, breast measure, 34, 36, 38, 40, 42, 44, 46, 48.

FEATHERWEIGHT TALMA.

(Pattern 4, page 3.)

This garment has the looseness of a cloak, and the advantages of full cape sleeves, fastening at the front from throat to waist, thereby securing free circulation of air around the arms, without depriving them of protection against moisture.

PRICE, \$8.00.

SIZES SAME AS THE COAT.

ULSTERS, - - - - \$10.00

(Pattern 3, page 3.)

LADIES' FEATHERWEIGHT INVERNESS.

With or Without Hood.

This garment combines the most complete protection with the utmost grace and beauty of effect on the wearer. It is relieved of the weight of the "Raglan" cape, but has the protection of the Raglan sleeves; is made double-breasted, with faced rolling fronts at the neck, and outside pockets.

PRICE LIST.

TO LADIES.

The Greatest Invention Known.

THE ADRIANNA,

A Substitute for Monthly Bandages.

Exclusively for ladies' use. Entirely new; nothing like it. Away with the old bandages, and have comfort and ease by wearing an Adrianna. It will give you pleasure. By its use a lady's monthly effusions are absorbed without change of linen, preserving cleanliness of person, avoiding staining the linen, bedding, etc., counteracting the usual unpleasant odor, giving perfect freedom of action, and preventing liability to catch colds at a critical period. This excellent article is highly approved of, endorsed, recommended and adopted into general use by all ladies of taste and refinement. It is now the universal favorite with them. It is what every lady has wished for.

In introducing this valuable article to the notice and patronage of the ladies, we would simply state that it is the only appliance a lady can adopt with certainty to prevent the improper use of incomplete bandages of the old style, and avoid the very disagreeable effects resulting from their encumbrance, which frequently subject ladies of delicacy to much annoyance, and place them in an embarrassing position during the time of their periodical indispositions.

The Adrianna is recommended by most celebrated members of the medical profession in their practice, and its value has proved of the most successful and flattering description for the Falling of the Womb, (one of the greatest evils a married lady is subject to,) Leucorrhœa or Finor Albus, (commonly called Whites,) Seminal Weakness, Secretions, Want of Power to Retain the Urine, Profuse Menstruation or Flooding, Polypus of the Womb, Inflammation and all Female Diseases, for which it is a certain preventive and radical cure.

Every lady approves of it at sight. Price, \$2 00 each.

Sent by mail to any address upon receipt of price, postpaid.

We have a complete line of rubber goods adapted to ladies' use. In fact, everything that is made or can be made in rubber may be found at our establishment.

LADY CLERK IN ATTENDANCE.

THE ATMOSPHERIC BOSOM.

A COMPLETE SUBSTITUTE FOR ONE OF NATURE'S GREATEST CHARMS.

What is more graceful or more to be admired than a handsome and fully developed bust? Some ladies are bountifully endowed naturally: we propose to do the same artificially. One of the greatest charms in beautiful women is the full and rounded contour of a well developed bust. The Atmospheric Bosom is elastic and inodorous, it is readily adjusted to any size by exhaling air into it, and will remain for an unlimited period any size desired by the wearer.

It expands, contracts and palpitates with the natural movements of the breast, is exquisite in symmetry and beauty, cannot be detected from nature, and at the same time awakens admiration and pleasure among the refined and intelligent. There is no article of lady's toilet ever received with greater acceptance than the Atmospheric Bosom; none gives greater satisfaction.

BURR'S PATENT NURSING BOTTLE.

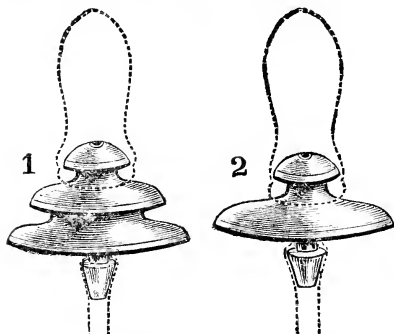

*The Most Healthful, Durable and Convenient
Nursing Bottle in the World.*

The peculiar shape of our Bottle, with its FLEXIBLE TUBE inside, Possesses Real Advantages. The Bottle can be laid upon either side without liability to leaking, and, if reversed, as they are almost certain to be by the child, the tube is not liable to be compressed into a sharp angle by the edge of the mouth of the Bottle, impeding the flow of the milk, and inducing the infant to over-exert itself in futile efforts to draw liquid into its mouth, making it fretful, &c. *This is impossible with Burr's Patent.*

For Prices, see Page 49.

BURR'S PATENT NURSING BOTTLE.

The above cut shows the construction and advantages of our Patent Combined Mouth-Guard, Nipple-Holder and Tube-Connector.

This is constructed of a single piece of boxwood, having beneath the mouth-guard a shoulder to which the tube is attached, and above the mouth-guard a shoulder or shoulders, which constitute the Nipple-Holder. No. 1, having two shoulders above the mouth-guard, is adapted to the use of a small or a large nipple, as may be preferred, while No. 2 will accommodate only the small nipple. With either, the nipple can be removed in an instant, the tube quickly and thoroughly cleansed with the aid of Burr's Tube Brush, (which should accompany each bottle,) and the nipple replaced without injury, and with no waste of patience or of time.

BEWARE OF WORTHLESS AND DANGEROUS IMITATIONS,

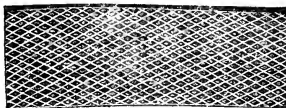

In which the mouth-guard and nipple-holder are in two separate pieces, so arranged that it is impossible, or next to impossible, to remove the nipple without destroying it. Such bottles, when in use, *are not*, and from their very construction *cannot* be kept sweet and fit for use.

The Best is the Cheapest, and Burr's Patent Nursing Bottle is not only **theoretically** the best, but it has stood the test of **TIME** and **USE**, having for more than **TEN YEARS** received the unqualified approval of Physicians, Druggists, Nurses, and Mothers.

To guard against worthless imitations, see that M. S. BURR'S "Pat. Aug. 27th, 1867, reissued Dec. 21st, 1875," are stamped on the mouth-guard, and that the words "BURR'S Patent Nursing Bottle, Pat. Nov. 26th, 1872," are blown in the glass bottle.

For Sale by Goodyear's I. R. Curler Co., 729 Broadway, New York.

RUBBER ELASTIC FORCE CUP.

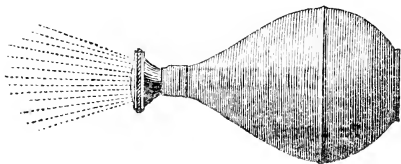

For instantly clearing the discharge pipes of wash bowls, bath tubs, stationary wash tubs, &c., when they become partially or entirely stopped.

This article is *Simple and Inexpensive*, can be used by any one, and does its work perfectly. The trouble, annoyance and expense of sending for a plumber to free your pipes may be avoided by its use.

Price, 50 cents. Large Size, \$100.

FLOWER SPRINKLERS.

Price, small, each, \$ 75

Large, each, 1 25

SHEET RUBBER,

For Steam Packing, &c.

This article is indispensable to Engineers and Machinists, wherever steam joints are to be made, as no substance has so much elasticity which stands so high a degree of heat. The packing is made in sheets of any thickness or length, and about 36 inches wide, and is warranted to stand at least 300 degrees of Fahrenheit.

Per lb.

MIXED OR FIBROUS PACKING, in sheets of all thicknesses, from 3-32 of an inch upward, \$ 50
Thinner sizes of same—say 1-16 of an inch or less, 60

GUM PACKING, with Cloth Insertion, in sheets of all thicknesses, from 3-32 of an inch upward, 55
Thinner sizes of same—say 1-16 of an inch or less, 65

HAIR CURLERS

The Flexible India Rubber Hair
Curlers and Crimpers.

Unlike Metal, will NOT CORRODE or rust the head or hair.

Will curl or wave any hair without the use of the hot curling irons or injurious Chemical Compounds.

They are very simple, can be used by a child, and are neat in appearance when in use.

THE FLEXIBLE INDIA RUBBER HAIR CURLERS AND CRIMPERS form soft, graceful curls and waves, which are therefore more natural. These articles are warranted to give perfect satisfaction, or money refunded. Sent to any address.

INDIA RUBBER.

Where it comes from and how it is Obtained.

India Rubber is imported into this country from South America, Central America, Africa, East India, and in fact it grows throughout the Tropics. About fifteen million pounds of the raw material are annually imported into the United States alone. The valley of the Amazon yields annually about twelve million pounds, nearly one-half of which is exported to the United States, and the remainder to Europe.

It was in the luxuriant tropical vegetation of South America that the India Rubber tree was first discovered and made known to the world. After steam and electricity, it has proven to be the most astonishing discovery of the nineteenth century. It is to-day used for thousands of useful and ornamental purposes. The number of different articles made to-day of India Rubber is innumerable, for the art of manufacturing it has improved daily, especially within the last twelve years, and in excess of any other class of goods manufactured in the United States. It enters into thousands of different classes of trade in consequence. It seems capable of being converted into almost any form or article other than food or drink.

The tree which produces India Rubber, or Caoutchouc, as it is called by the natives of South America, is found in the tropics of both hemispheres. It grows to the height of about sixty feet, without branches, except at the top, where it is crowned with a rich foliage. The leaves are of a dark green color, thick and glossy, resembling the magnolia; the bark is smooth, and the fruit consists of a white almond, eaten by the natives.

The Rubber is obtained by tapping. In order to obtain it the natives make a long gash in the bark of the tree, with a narrow hatchet; a thin white and oily liquid flows out; the milk or juice resembles cow's milk; a wedge is then inserted to keep the gash open; a small clay cup, rudely constructed, is stuck to the tree

beneath the gash. In about four hours the milk ceases to run, and each cup has yielded about a gill. The Seringelo or Rubber-gatherer then collects the cups and empties the contents into large clay vessels, and commences the operation of forming the milk into shape and smoking it.

This must be done within a few hours, as the milk soon congeals and becomes thick. A fire is then made on the ground, of the nuts of the Wasson palm tree, over which is placed inverted an earthen pot, with a number of holes in the bottom, whence issue jets of pungent smoke; moulds made of clay which have been dipped in the milk are then passed slowly through the hot smoke. After the required thickness is obtained the moulds are cut and washed out, thus leaving nothing but the pure Rubber. The smoke changes the color of the Rubber very little, but after an exposure to the sun and atmosphere, becomes brown and after a time black.

The Rubber from India and Africa is obtained by allowing the sap from the gash to flow down the side of the tree into a kind of basin scooped out in the soil. It is then gathered with the loose bark and dirt into bundles for shipment.

India Rubber in its crude state becomes soft when subjected to heat, and very hard when exposed to severe cold, but by the vulcanizing process, invented by the late Charles Goodyear, which consists of incorporating with the Rubber a small portion of sulphur and other ingredients—subjecting it to heat from 250 to 300 degrees of temperature, for several hours—it is rendered uniformly elastic when exposed to the most intense cold or to any moderate degree of heat.

As early as 1813, a patent was taken out in Philadelphia by Jacob Hummel, for a water-proof varnish, made of India Rubber, although in England one Chas. Fleetwood, was granted letters patent in 1784 for about the same composition—i. e., rubber, bees-wax and oil.

But all such compositions when dried with the addition of linseed oil were found for a time to remain flexible, but at times would become hard and dry, then brittle, and in cold weather would crack, thus preventing its being water-proof.

About the year 1821 Chas. Mackintosh, of England, first manufactured a water-proof cloth, by spreading a thin layer of Rubber, dissolved in turpentine, between two thicknesses of cloth, and

afterwards made into clothing, blankets, etc., and to this day these goods are known as Mackintosh clothing. About this time an officer in the Austrian army started a factory near St. Denis, in France, for making elastic goods—braces, garters, etc.

RUBBER OVERSHOES.

From 1824 to 1828 India Rubber became the subject of scientific investigation. In 1832 there was a large factory started in Roxbury, Mass. About the same date there were some four or five other factories started in New England. All these factories, after striving four or five years to overcome the objectionable qualities of Rubber, as then manufactured, abandoned the business at a heavy loss.

CHARLES GOODYEAR.

In the year 1834 Charles Goodyear, who was born in New Haven, Conn., Dec. 29, 1809, had his attention drawn to the manufacture of India Rubber, and not knowing at the time the many difficulties with which he had to contend, commenced experimenting. He resolved, if possible, to accomplish that which had baffled many of the best scientific men of the day. His object was to divest India Rubber of its objectionable qualities. It would be impossible in a brief notice like this to detail the hopes and fears, the alternation of success and failure, in his experiments during the next six years, followed as they were by disheartening trials, struggles and poverty, such as are generally experienced by eminent discoverers.

But confident of ultimate success and the applause of the public, he continued his efforts.

From 1834 to 1839 he kept up his experiments; his stock of money gradually grew smaller. Misfortune and disappointments overtook him, his family was reduced to extreme poverty; he was denounced by his friends as insane. Had his experiments required the aid of machinery, or more than a few dollars at a time, necessity would have compelled him to desist from the experiment, but his extraordinary persistence was at last rewarded, for after a long series of experiments he at last discovered the vulcanizing process now so well known throughout the civilized world as the Goodyear process. The first idea of vulcanizing Rubber by the application of heat occurred to Mr. Goodyear in 1839, but it was not until 1843

that he had so far perfected his invention as to apply for patents in the United States, England and France. June 15, 1844, he obtained his first patent from the United States Government for vulcanizing India Rubber. New, curious and useful applications have constantly been made since Goodyear first obtained his patent. The patent for hard Rubber was granted to Nelson Goodyear by the United States Government, May 6, 1851.

The change effected in Rubber by the Goodyear process may be compared to what is wrought in a perishable hide or skin by tanning; it produces an article that has all the valuable properties of Rubber in its highest perfection without the imperfection of the native rubber; it can be made as hard as iron, with a beautiful polish almost equal to glass; it can be made as elastic as the native rubber.

In the manufacture of Rubber from three to ten per cent. of sulphur and various metallic oxides (chiefly lead and zinc) are combined with it. The quality of the latter depending on the degree of elasticity and other properties required of the article to be manufactured; and to judiciously combine the substances with the Rubber in suitable proportions to produce the desired end, as well as in properly vulcanizing it afterward, requires great experience and skill.

A certain degree of honesty on the part of the manufacturer is also essential, to abstain from introducing mere adulterated substances into his "compound" and thereby cheapening the product at the expense of its quality.

This always proves very expensive to the consumer. It is a common error with persons not conversant with the subject, to suppose that Rubber in being manufactured is treated with solvents, and can therefore, if necessary, be run into a mould like molten lead, but this is entirely a mistake, as, since Mr. Goodyear's invention of vulcanizing Rubber, no solvents have been used in its manufacture, the intermixing being done by the operation of machinery, after the manner of mixing dough for bread, and at no stage of the process up to the time of vulcanizing is the Rubber softer than stiff dough, and consequently it has to be pressed and moulded into the various forms required.

0 018 455 355 7

GUTTA-PERCHA.

Many persons suppose that India Rubber and Gutta-percha are one and the same thing. Gutta-percha is produced from the sap or juice of the Gutta tree, found in all the islands of the Indian Archipelago. In its crude state it has no resemblance to the India Rubber of commerce, nor are its chemical and mechanical properties the same. It is a fibrous substance, oily, and much resembles sole-leather; it is without elasticity or much flexibility. If allowed to remain in hot water for a few minutes it becomes soft, like putty, and can be moulded into any shape.

Goodyear's process has been applied to it, but it does not have the same effect as on Rubber; the articles are liable to become hard and brittle in time. Its principal use to-day is for insulators, submarine telegraph cables, tanks for holding acids, etc.
